

Time: 9/26 Wednesday 5-7 pm

- Mainly was trying to decide between or CU Map app or the Secret Family Recipe app - talked about Pros and Cons of each
 - at first it seemed like doing the CU Map app, which finds smallest distance between 2 buildings via possible pathway using A* algorithm, was popular,
 - Ultimately we ultimately we decided to go with recipe app as setting up nodes and mapping the entire campus would take up too much time.
 - For back end, we decided that PostgreseSQL database will be best option, and bootstrap will be best for front end, but did not delve into specifics too much after that
